TECHNICAL SKILLS

Programming: C, C++, Python, Java, JavaScript, Bash

Web & Application Development: Django, Wordpress, Hugo, HTML, CSS, Node.js-based build tools

Systems & Infrastructure: Arch Linux, Ubuntu, LUKS Encryption, Shell Scripting, Networking, DNS Configuration, Virtual Private Server Web Hosting and Security, Nginx, Docker, Docker Compose

Databases & Enterprise Systems: MariaDB, Oracle Database, Ellucian Banner, Evisions MAPS

Development & Deployment: Git, GitHub, CI/CD, Cloudflare Pages, Production & Pre-Production Environments

Embedded Systems: FreeRTOS

SUMMARY

Computer Science graduate with hands-on experience in full-stack application development, Linux system administration, Oracle database environments, networking, and production web deployment. Experienced supporting healthcare and enterprise university systems, building and deploying production applications, and contributing to embedded satellite flight software using FreeRTOS. Strong technical foundation across C/C++, Python, Java, JavaScript, Bash, Linux, databases, and web infrastructure.

EXPERIENCE

Service Desk Technician I

May 2026–Present

Stillwater Medical Center

Stillwater, OK

- Led a Total Dress Rehearsal (TDR) team validating 50+ hospital workstations ahead of the Epic EHR go-live, surfacing and resolving readiness issues before cutover so clinicians started on the new system with working machines.
- Diagnosed and repaired broken Epic client installations across clinical workstations, restoring EHR access quickly during a high-stakes enterprise migration.
- Built and deployed standardized Windows images to 100+ devices through internal software packaging and imaging processes, provisioning new hardware and reimaging aging machines with consistent, repeatable configurations.
- Resolve incidents for several thousand users in a regulated, high-availability healthcare network, troubleshooting VMware/Omnissa Horizon VDI, IGEL thin clients, NextGen, and Meditech using Active Directory, PowerShell, BeyondTrust, and Deskpro ticketing.
- Root-cause issues across the stack, from application access and print services to network closet hardware, keeping clinical and administrative staff productive where downtime affects patient care.

Student Worker, Database Administration

Jan 2026–May2026

Oklahoma State University – Enterprise IT

Stillwater, OK

- Investigated incorrect behavior in Ellucian Banner and Evisions MAPS by running SQL query checks against Oracle databases and reviewing batch server logs on Linux, pinpointing root causes so faculty and staff could resume work.
- Researched and documented a previously undocumented update process by working through vendor documentation and independent research, giving the team a repeatable procedure for routine updates and a reference for onboarding future hires.
- Troubleshot network printing failures across Ellucian integrated services, tracing the issue through configuration and connectivity layers to restore printing for several departments.

Coordinator / Student Math Tutor*Oklahoma State University – Mathematics Learning Success Center*

Aug 2022–May 2026

Stillwater, OK

- Supervised 5–6 tutors at a time in a center serving 1,500+ students per semester, handling scheduling, performance feedback, and escalations to keep coverage consistent during peak demand.
- Tutored College Algebra through Differential Equations, and was named Tutor of the Year and Tutor of the Month by leadership nomination and vote.

PROJECTS

Senior Living Truth Series | Django Web Platform | Solo Developer

- A local Real Estate Agent needed a production website their team could update themselves, plus a way to register and track seminar attendees.
- Built a Django platform with a custom CMS, an authenticated admin dashboard, and database-driven content. Created a registration API endpoint secured with API-key authentication and connected it to n8n workflows. Wrote ORM queries for attendance reporting and a CSV export for admins. Set up cloud hosting, DNS, and separate production and pre-production environments. Wrote a script-based CI/CD pipeline for releases.
- The client updates content and manages registrations without developer help, except for requesting new features. Staging caught issues before live releases, and scripted deploys replaced manual steps. Application has been saving the team substantial time for 8 months. Database stores 2000+ attendees, averaging about 120 attendees per seminar, and providing operational insights to managing team.

Priority | iOS Task Scheduling App | Team Lead, 6 people | OSU

- Identified a problem that students juggle assignments, projects, and exams, and miss deadlines because they have no plan for when to actually do the work.
- Led sprint planning and assigned work across a 6-person team. Built a Swift app that reads assignments and schedules homework and study time. Integrated Auth0 login, wrote XCTest unit tests for the task view model, and added a WidgetKit home-screen widget.
- Delivered a working app, demoed it, and received an A in the class.

OKCubeSat Initiative | Satellite Flight Software | OSU

- The university's multi-semester CubeSat program needed flight software architecture for a spacecraft with real-time constraints and no room for missed tasks.
- Helped define the system architecture and FreeRTOS task structure for embedded operations. Did preliminary software design and simulation work to test behavior before hardware integration.
- Delivered a scaffolded task system for later semesters to build on. Provided POSIX integration with MATLAB for integrated system demo at the Engineering EXPO. Produced incredibly detailed documentation about the semester's work, as well as the project as a whole to save future teams research time.

Seda Real Estate Group | WordPress Deployment | Freelance

- The business needed a professional site refresh to improve Google Search Results rankings.
- Built a responsive site with a custom WordPress theme and deployed it to a VPS using Docker Compose, MariaDB, an Nginx reverse proxy, and Certbot SSL. Configured production DNS and set up Git-based theme deployment with database backup workflows.
- The site went live on the client's domain with HTTPS and repeatable deployments. Site traffic has increased due to professional appearance and polished blog capabilities.

EDUCATION

Oklahoma State University*Bachelor of Science in Computer Science, Minors: Mathematics and Information Assurance**President's Honor Roll: Spring 2023, Spring 2025, Spring 2026**Dean's Honor Roll: Fall 2022, Fall 2023, Spring 2024, Fall 2024, Fall 2025*

Stillwater, OK

May 2026

GPA: 3.835/4.0
